## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1631

The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 1631.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are vague, indefinite, and incomplete.

- (a) The recitation of "functional equivalents thereof" (claims 1 and 2) is vague and indefinite because the metes and bounds of the claims are not clear.
- (b) The recitation of "polynucleotides" (claim 13) is incomplete because there is no antecedent basis for the term. Substitution of "polynucleotide" for "polynucleotides" would be sufficient to overcome this part of this rejection.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1631

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cox et al (J. Virol. 67(9): 5664 (1993)) in view of applicants' admitted state of the prior art (e.g., instant application, page 32, lines 15-19). Cox et al teaches a method for eliciting an immune response from cattle and mice by injecting animals with plasmid DNA containing BHV-1 sequences. Applicants acknowledge the HSV-2 genome to be old and known. It would have been obvious for one of ordinary skill in the art to use any of the admittedly old HSV-2 DNA sequences in the method of Cox et al to elicit an immune response to HSV-2. Applicants' arguments (paper no. 6, pages 5-6) are not convincing because they do not address the issue set forth in the rejection. Applicants argue that BHV and HSV are different diseases with different disease states. This is irrelevant to whether one of ordinary skill in the art would expect the HSV-2 sequences of Cox et al to elicit an immune response to HSV-2 if used in the manner that Cox et al use BHV-1 DNA.
